(54) REFLECTION TYPE LIQUID CRYSTAL DISPLAY DEVICE AND PRODUCTION THEREOF

(57)Abstract:

PURPOSE: To provide the process for producing the reflection type liquid crystal display device provided with a reflection plate having good reflection characteristics with good reproducibility.

CONSTITUTION: A photosensitive resin is applied on one surface of a substrate and is patterned by using a photomask by which many fine projecting parts 14 of the same shape are formed. The substrate formed with the projecting parts 14 is subjected to a heat treatment and further a reflection film 16 is formed over the entire surface from above by which the reflection plate is obtained. The reflection characteristics of the reflection plate are satisfied by controlling the shape of the projecting parts.
